                                                                                                                                                                              The present sequence is a gene, which encodes a protein with vacuolar pH regulatory activities. The gene enables flower colour to be controlled via regulation of the vacuolar pH, colours can range from blue to red in colour spectrum. The gene is useful in controlling flower colour to give new breeds of colourful plants for cut flowers, particularly applicable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1115

The invention relates to an isolated nucleic acid molecule encoding a plant Na/H antiport (PNHX) transporter polypeptide, or a fragment and capable of increasing salt tolerance in a cell. This sequence corresponds to the gene encoding the AtNHX1 transporter from Arabidopsis thaliana.

The Na/H transporter polypeptides provide a means of intracellular salt ananagement, particularly in plants. The sequences are useful for producing transgenic plants that are capable of surviving in soil with high salt levels that would normally inhibit growth of the crop species. This would be useful in farming land in areas that are generally considered unproductive through salt accumulation and poor irrigation, e.g. in India, Australia, and prairies in USA or Canada. Commercial strawberries, spinach, lettuce, irice, soybean, corn, wheat, rye, barley, atriplex, sorghum, alfalfa, salicornia and others would benefit from increased salt tolerance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              568

The present sequence is a gene from Morning Glory, which encodes a protein with vacuolar pH regulatory activities. The gene enables flower colour to be controlled via regulation of the vacuolar pH, colours can range from blue to read in colour spectrum. The gene is useful in controlling flower colour to give new breeds of colourful plants for cut flowers, particularly applicable in horticulture.

```
The invention relates to an isolated nucleic acid molecule encoding a plant Na/H antiport (PNHX) transporter polypeptide, or a fragment and capable of increasing salt tolerance in a cell. This sequence corresponds to the gene encoding a transporter from Arabidopsis thaliana. The Na/H transporter polypeptides provide a means of intracellular salt management, particularly in plants. The sequences are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sodium; proton; antiport; transporter; salt tolerance; salt management; transgenic plant; survival; soil; farming; accumulation; irrigation;

3,
producing transgenic plants that are capable of surviving in soil with high salt levels that would normally inhibit growth of the crop species. This would be useful in farming land in areas that are generally considered unproductive through salt accumulation and poor irrigation, e.g. in India, Australia, and prairies in USA or Canada. Commercial crops, such as potatoes, tomatoes, brassica, cotton, sunflower, strawberries, spinach, lettuce, rice, soybean, corn, wheat, rye, barley, atriplex, sorghum, alfalfa, salicornia and others would benefit from increased salt tolerance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1086

The present sequence is a gene, which encodes a protein with vacuolar pH regulatory activities. The gene enables flower colour to be controlled via regulation of the vacuolar pH, colours can range from blue to red in colour spectrum. The gene is useful in controlling flower colour to give the breeds of colourful plants for cut flowers, particularly applicable
                                                                                                                                           Morning glory-originated gene encoding a protein with pH regulation activity in vacuoles, useful in controlling flower color to give new breeds of colorful plants for cut flowers, particularly applicable in

The invention relates to an isolated nucleic acid molecule encoding a plant Na/H antiport (PNHX) transporter polypeptide, or a fragment and capable of increasing salt tolerance in a cell. This sequence corresponds to the gene encoding the AtNHX2 transporter from Arabidopsis thaliana. The Na/H transporter polypeptides provide a means of intracellular salt management, particularly in plants. The sequences are useful for producing transgenic plants that are capable of surviving in soil with high salt levels that would normally inhibit growth of the crop species. This would be useful in farming land in areas that are generally considered unproductive through salt accumulation and poor irrigation, e.g. in India, Australia, and prairies in USA or Canada. Commercial crops, such as potatoes, tomatoes, brassica, cotton, sunflower, atriplex, sorghum, alfalfa, salicornia and others would benefit from increased salt tolerance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1;

New Na+/H+ antiporter nucleic acids and proteins, useful e.g. for modulating stress tolerance in plants, or for detecting, preventing, conferring resistance to or treating hyperproliferative diseases, e.g. cankers, galls or tumours

Claim 1; Fig 2; 204pp; English.

process to the treatminteation and isotrated to that the polymuclectides or polypetides are further used to detect, prevent, confer resistance to and/or treat hyperproliferative diseases such as cankers, galls, tumours, and appressorium, increase of diseases such as cankers, galls, tumours, and appressorium, increase plant defence mechanisms against environmental or pathogenic stresses of e.g. viral, fungal, mycoplasma, bacterial, nematode, herbicidal, insecticidal, acid rain, drought, or chemical), and hormone synthesis. The Na+H+ antiporter coding nucleic acids can be used in creating transgenic plants with desirable traits, including enhanced plant certains including enhanced plant certains including enhanced plant companied to recombinant proteins to raise antibodies against polypeptides, as markers for tissues in which the corresponding protein is expressed, as chromosome markers or tags for chromosome mapping, and for genetic fingerprinting. The polypeptides are useful in the identification, prevention, and/or conferment of resistance to plant diseases, corresponding protein stress corresponding environmental stress responses, such as drought, freezing and salt tolerance. The polypeptides of particularly those associated with modulating environmental stress of environmental in madularing and for plant diseases. The invention relates to novel isolated Na+/H+ antiporter coding nucleic acid (I) and polypeptides (II). (I) and (II) are useful in modulating the stress toolerance in a plant, preferably modulating a plant's toolerance to limited or inadequate water availability, excess salt or osmotic conditions, excess temperature conditions, excess metal concentration in soil or water, chemical stress and oxidative stress. These may also be used as carbon, nitrogen or carbohydrate source, in modulating plant defence activity, signal transduction, or metabolite transport; or as probes for the identification and isolation of full length cDAAs or are further useful in modulating plant yield, development, differentiation, root growth, root morphology, plant colour, plant aroma, plant flavour, palatability of plant tissue, plant organoleptic properties, ability to serve as plant nutraceutical, pharmaceutical or phytoceutical, ability to produce nutraceutical, pharmaceuticals or phytoceuticals of either endogenous or exogenous origin. Antibodies may be used in diagnostic assays to detect the presence or quantity of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid molecule encoding a plant NaTH antiport (PNHX) transporter polypeptide, or a fragment and capable of increasing salt tolerance in a cell. This sequence corresponds to an Na/H antiport transporter gene fragment from the rice expressed sequence tag (EST) library clone AAO91812. The Na/H management, particularly in plants. The sequences are useful for

producing transgenic plants that are capable of surviving in soil with high salt levels that would normally inhibit growth of the crop species. This would be useful in farming land in areas that are generally considered unproductive through salt accumulation and poor irrigation, e.g. in India, Australia, and prairies in USA or Canada. Commercial crops, such as potatoes, tomatoes, brassica, cotton, sunflower, strawberries, spinach, lettuce, rice, soybean, corn, wheat, rye, barley, atriplex, sorghum, alfalfa, salicornia and others would benefit from increased salt tolerance.

The invention relates to an isolated mucleic acid molecule encoding a plant Na/H antiport (PNHX) transporter polypeptide, or a fragment and capable of increasing salt tolerance in a cell. This sequence corresponds to an Na/H antiport transporter gene fragment from the Arabipdosis expressed sequence tag (EST) library clone AAT75860. The Analpdosis expressed sequence tag (EST) library clone AAT75860. The Na/H transporter polypeptides provide a means of intracellular salt management, particularly in plants. The sequences are useful for producing transgenic plants that are capable of surviving in soil with high salt levels that would normally inhibit growth of the crop species. This would be useful in farming land in areas that are generally considered unproductive through salt accumulation and poor irrigation, e.g. in India, Australia, and prairies in USA or Canada. Commercial crops, such as potatoes, tomatoes, brassica, cotton, commercial crops, such as potatoes, tomatoes, brassica, cotton, rye, barley, atriplex, sorghum, alfalfa, salicornia and others would benefit from increased salt tolerance.
                                                                                                                                                 Nucleic acid molecules encoding sodium/proton transport polypeptides, useful in genetic engineering salt tolerance in crop plants

```
The present sequence describes a purified corn tassel-derived
polynucleotide sequence (cdps) comprising a nucleic acid sequence
selected from those given in ABL70627 to ABL76833. The cdps sequences
cencede corn tassel-derived polypeptides (CDPs). The cdps sequences
can be used for determining altered gene expression, to recover
can be used for determining altered gene expression, to recover
central control of collow inheritance of desirable
characteristics through hybrid breeding programs. (I) are also useful
in the evaluation, and alteration of desired characteristics associated
with growth and development, disease resistance, environmental
adaptability, quality and yield, and as molecular markers for studying
contransoribity, quality and yield, and as molecular markers for studying
contransoribit image, to clone regulatory elements for use in transformation
centrol or express a polypeptide, to identify, isolate or extend
centrol or related corn tassel nucleic acid sequences from DNA
control or related corn tassel nucleic acid sequences from DNA
control or use in Southern or Northern hybridisation, and to identify the
corn use in Southern or Northern hybridisation, and to identify the
corn more) nucleic acid sequences.

Corn more) nucleic acid sequences.
                                                                                                                                                                                                                                                                                                                                               determining altered gene expression, to recover regulatory elements and to follow inheritance of desirable characteristics through hybrid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1029 GGAAGGCATTCTACTGACCGTGAGGTTGCCCTTATGATGCTCATGGCTTACCTTTCATAT 1088

Flea Malpighian tubule and head and nerve cord tissue derived nucleic acids useful for the prevention, diagnosis and treatment of flea

Claim 1; Page 894-895; 964pp; English.

infestations

The invention relates to novel cat flea (Ctenocephalides felis) nucleic acids which are expressed in hindgut and Malpighian tubule (HMT) tissue or head and nerve cord (HMC) tissue. The invention also relates to the encoded proteins. The invention additionally encompasses expression constructs, recombinant viruses and recombinant cells comprising the nucleic acids of the invention, recombinant production of the proteins, and compositions comprising the inhibitors of the proteins, and compositions comprising the inhibitors of administration to an animal. The nucleic acids, and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with flea infestations. For example, the nucleic acids may associated with flea infestations. For example, the nucleic acids may used to produce an HMT or HMC protein according to standard recombinant culturing the cell to express the protein. The HMT and HMC nucleic acids may also be used as DNA probes in diagnostic assays (e.g., PCR) to detect and quantitate the presence of cat files or other homologus nucleic acid and quantitate the presence of cat files or other homologus nucleic acid function of the proteins and their role in metabolism. The HMT and HNC protein may be used as antigens in the production of specific and and in a samples. used as diagnostic agents for detecting the presence of flea polypeptides in samples (e.g., by enzyme linked immunosorbent assay (ELISA)). The present sequence represents a cat flea HMT cDNA of the invention. antibodies, and in assays to identify modulators (agonists and antagonists) of HMT and/or HNC protein expression and activity. The anti-HMT/HNC protein antibodies and antagonists may also be used to downregulate protein expression and activity. The antibodies may also be

Flea Malpighian tubule and head and nerve cord tissue derived nucleic acids useful for the prevention, diagnosis and treatment of flea infestations -

Claim 1; Page 895-896; 964pp; English.

The invention trainers to novel cat thes (Cenocophaliose Felis) nucleic acids which are expressed in hindgut and Malpighian tubule (HMT) tissue or head and nerve cord (HMC) tissue. The invention also relates to the encoded proteins. The invention additionally encompasses expression constructs, recombinant viruses and recombinant cells comprising the nucleic acids of the invention, recombinant production of the proteins, and the proteins, and compositions comprising the inhibitors of the proteins, and compositions comprising the inhibitors of administration to an animal. The nucleic acids, and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with flea infestations. For example, the nucleic acids may be used to produce an HMT or HMC protein according to standard recombinant DNA methodology by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The HMT and HMC nucleic acids and quantitate the presence of cat flea or other homologous nucleic acid sequences in samples. They may also be used to study the expression and tunction of the proteins and their role in metabolism. The HMT and HMC proteins and their role in metabolism. The HMT and HMC proteins may be used as antigens in the production of specific acids antigonists and ain assays to identify modulators (agonists and antigonists) of HMT and/or HMT protein expression and activity. The antigonists of the protein expression and activity. anti-HMT/HNC protein antibodies and antagonists may also be used to downregulate protein expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of flea polypeptides in samples (e.g., by enzyme linked immunosorbent assay (ELISA)). The present sequence represents a cat flea HMT cDNA of the invention. invention relates to novel cat flea (Ctenocephalides felis) nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 8, Application US/09097053
Patent No. 6392025
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: From Chris C.H.
APPLICANT: From Chris C.H.
APPLICANT: OF INVENTION:
TITLE OF INVENTION: Cloning, Tissue Distribution, and
TITLE OF INVENTION: Punctional Analysis of The Human Na+/H+ Exchanger Isoform,
TITLE OF INVENTION: NHE3.
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CTTACCTTTCATATATGCTGGCTGAGTTGCTAGATTTGAGCGGCATTCTCACCGTATTCT 1134

                                                                                                                                                                                                                                                                                                                           Sequence 1, Application US/08728323A

Patent No. 5948676

GENERAL INFORMATION:
APPLICANT: Chang, Yuan
APPLICANT: Russo, James J.
APPLICANT: Russo, James J.
APPLICANT: Moore, Patrick S.
TITLE OF INVENTION: Immediate Early Protein From Kaposi's
TITLE OF INVENTION: Sarcoma-Associated Herpesvirus, DNA
TITLE OF INVENTION: Brocding Same And Uses Thereof
NUMBER OF SEQUENCES: 21
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1.9%; Score 44.6; DB 2; Length 3489; 50.7%; Pred.
